HW46 - Plan for Wrapper of Super Array

2021-12-09

time spent: 30 min

- We're thinking about using `get()` to access the elements in the SuperArray object that is provided as an argument and adding those elements based on how large they are. add elements already is array?

if statements

Failures considered:

- For loop not stopping since the element has a value greater than all the elements on the list
